

CLAIMS

I claim:

comprising:

5

1.

An apparatus for the production of wood composite boards,

(a) a press having platens for forming the board; and

(b) means for regulating the temperature of the platens, the regulating

means including:

(i) means for circulating a heating fluid through the platens,

(ii) means for detecting the temperature of the heating fluids as it

10

exits the platens; and

(iii) means for responding to the detected temperature for heating
the fluid supplied to the platens.

2.

The apparatus according to claim 1, wherein the press is selected from
the group consisting of multi-platen press and continuous press.

15

3.

The apparatus according to claim 1, wherein the heating fluid is
selected from the group consisting of heated natural gas, superheated steam, and heated oil.

4.

The apparatus according to claim 1, wherein the heating means
comprises a heat exchanger.
